

Q1. DBMS – Key Concepts

Q1

DBMS – Key Concepts

IN SUMMARY

-  DBMS manages Schema, Instance and Data Model.
-  These are represented using an ER Diagram.
-  ER Diagram consists of Entity, Attribute and Relationship.
-  These concepts together help in designing an efficient and effective database.

Key Idea: DBMS organizes data in a structured way using schema, instance and data model, which are represented graphically using an ER Diagram composed of entities, attributes and relationships.
